PROFESSIONAL EXPERIENCE

Lead Specialist, Gallagher Service Pvt Ltd, Bangalore, India

Dec 2021 – July 2025

- Engineered end-to-end analytics pipelines spanning data ingestion, transformation, model execution, and aggregation, cutting manual processing time by 35% and freeing analysts to focus on strategic account insights.
- Optimized backend SQL queries within a custom-built analytics platform, reducing report delivery time from days to hours and accelerating client-facing analysis.
- Co-developed classification and validation logic across multiple data dimensions, covering field mapping, categorization, and exception handling for a cross-system data conversion process, minimizing manual reclassification effort for analysts and strengthening first-pass data accuracy for downstream analytics and model execution.
- Tuned SQL scripts and batch logic across upstream reporting processes, improving execution efficiency by 8–10% and sustaining performance as data volumes scaled.
- Established standardized SOPs for core analytical workflows in collaboration with internal and client stakeholders, enabling consistent platform adoption across analysts and limiting dependency on ad-hoc knowledge transfer during team scaling.

Senior Catastrophe Analyst, AIG Analytics, Bangalore, India

July 2016 – Dec 2021

- Delivered analytical insights across 200+ client accounts and portfolios, informing portfolio-level strategy through structured analysis and model execution.
- Improved data quality scores to 95%+ by implementing rigorous validation, reconciliation, and QC processes, curbing downstream errors and rework.
- Streamlined multi-stage analytical workflows spanning data preparation, validation, model execution, and final output integration, compressing turnaround time from 6 days to 2 days and speeding insight delivery.
- Developed interactive Power BI dashboards to monitor team performance and surface improvement opportunities, supporting continuous process refinement across the team.
- Mentored and trained 6+ new analysts on workflows, data processes, and reporting tools, shortening ramp-up time and boosting team readiness.

PROJECTS

Disaster Monitoring Pipeline | [GitHub Repo](#)

Architected a real-time disaster monitoring pipeline using Kafka for event ingestion, Spark (PySpark) for stream processing, and MongoDB for storage, all containerized with Docker. Trained ML models (Random Forest, KMeans, anomaly detection) for risk scoring, regional clustering, and spike event detection, and surfaced insights through an interactive Streamlit dashboard.

Aspect-Based Sentiment Analysis - Amazon Electronics Reviews | [Github Repo](#)

Built a modular ABSA pipeline using DistilBERT embeddings (HuggingFace Transformers) and custom deep neural networks (TensorFlow/Keras, PyTorch) to classify product aspects and sentiment polarity, validated through confidence analysis and per-aspect confusion matrix evaluation.

Evaluating Technical Indicator-Based Trading Strategies vs. Top Mutual Funds | [Github Repo](#)

Built a technical indicator backtesting framework (yfinance, pandas, NumPy, Matplotlib) evaluating 10+ trading strategies against top mutual funds, then extended with ML signal generation (Random Forest, XGBoost) using engineered indicator features, time-series cross-validation, and feature importance analysis to compare learned vs. rule-based signal efficacy.

EDUCATION

Ontario Tech University - Sep 2025 - Present

Master's in Business Analytics and AI

Biju Pattnaik University of Technology (KEC) - 2011-2015

Bachelor of Engineering in Electronics and Telecommunication

SKILLS

Programming: SQL, Python (pandas, NumPy, Polars, statsmodels, scikit-learn, PyTorch, TensorFlow/Keras, HuggingFace Transformers, NLTK, PySpark, LLM)

Data Tools: Tableau, Power BI, Git

Data Engineering: Apache Kafka, Apache Spark, Delta Lake, MongoDB, Docker, AWS S3
